DATAMATE™

Greater Utilization of Report Data

Production reports provide invaluable information about your plant.

- Improved scheduling
- Increased control of production and inventory
- Comprehensive analysis of your business

These are just a few of the benefits PMC Software MATE product production reports provide.

Although our reports provide comprehensive data to your plant, PMC has developed a method to provide our customers with even more access to information contained within our MATE database. DATAMATE™ has been developed to enhance our Windows® based reporting modules. When a report is run within a PMC MATE product, DATAMATE™ saves a copy of the dataset used for the report. An extremely valuable asset to your business, your production data, is at your fingertips for customization in any way your plant requires.

Most PMC Software MATE reports are currently available for data extraction. And as more Crystal Reports™ based reports are created, their datasets would be automatically added to this list.

The files created by DATAMATE™ will be saved with the same name as the report and an extension equal to the unique setting of a particular workstation on which the report was produced, keeping data for each workstation intact.

DATAMATE™'s approach allows you to take advantage of the data filtering that occurs at the forefront of each report so the resulting data is for precisely the record set that was used to create the report. This eliminates the need for you to process through the extensive information contained within our Pervasive™ databases, much of which might not be directly related to the particular report of interest.

We're convinced that DATAMATE™ is a powerful new tool to provide your company with the information needed to increase control over your operations, maximize efficiency, and increase productivity.

Permits use of data mining
- Allows you to discover hidden patterns in your data that can help you understand customer behavior and market trends
- Enables you to capitalize on the benefits of data mining more effectively
- Allows you to utilize data mining to keep your business profitable

Significantly improved production reporting
- Customization of report data into whatever format required
- Easily generate business analysis reports with up to the minute data
- Superior communication within your company

Provides a software application that empowers you to uncover previously undetected facts about customers, inventories and your bottom line

Enhances production tracking, scheduling, inventory control and forecasting

PMC Software's report filtering provides you with just the data you need
